Quick connect/release hanger bar to connect, push hanger bar onto shaft until you hear a “click”. Make sure it is firmly attached! To release, press the release button located at the bottom of the hanger bar. Never press the release button when operating the lift.

Slings
Attach head sling loops to hanger bar first, then leg straps to leg hooks. Ensure the straps are secured beneath the safety pin.

Proper lifting techniques
Do not use the hanger bar to move the patient and the lift. Do not hold onto the hooks while performing a lift. Once the patient is comfortably secured in sling, raise lift, hold sling and position/move patient.

If the indicator light is constant yellow:
- The lift is correctly mounted on the distance strap or rail roller. Always check slings and belts for signs of wear before use.

Important! Use only authorized methods to transport! Lift must always be stored or moved in horizontal position. Rest on cart to move or use approved carry strap. Caution! When using strap, extra caution must be taken not to twist or bend the lift belt.

If the indicator light is flashing, check the following:
- Hand control button does not function up/down when depressed (replace if necessary)
- When pressing up, the lift is not already in its maximum upper position (lower with down button)
- When pressing down, the lift is not already in its maximum lower position (raise with up button)

If the indicator light is constant red:
- The lift motor is overheated - allow to cool
- The lift is overloaded - lower using emergency lowering button
- The lift is overloaded - lower using emergency lowering button
- The batteries need charging, patient may be lifted a few more times

If the indicator light is not on, check the following:
- Mains switch is on
- Batteries are fully discharged - charge or replace
- Emergency stop button is not pushed in (deactivate by turning clockwise)

Hand Control Functions
1 Up Button
2 Down Button
3 USB and Charge Port

Components
1 Hanger Bar
2 Lift Belt
3 Secondary Panel
4 Leg Hook
5 Emergency Stop
6 Hand Control

Secondary Panel Functions
1 Status Indicator Light
2 Power On/Off
3 Raise Lift
4 Lower Lift
5 Emergency Lowering

Status Indicator Lights
- Flashing Green: On/Ready for Use
- Flashing Yellow: On/Ready for Use
- Flashing Red: On/Ready for Use
- Constant Green: Lift in Use
- Constant Green: Offered with Human Care charger and must be disconnected to use the lift.

Important! This quick reference guide does not replace the user manual which can be downloaded at www.humancaregroup.com. Read all instructions before use!

Important! This overhead lift has been designed and tested for indoor use with one patient at a time. This product must not be immersed in water. Read all instructions for full product information!

Important! Emergency lowering must only be used in emergency situations. There will be a 3 second delay. To activate, press “Down” button [4] and secondary panel emergency lowering button [5] at the same time.

Suspending the lift
Place the lift on a suitable surface and feed out belt by gently pulling out belt while at the same time pressing the “Down” button on either the hand control or secondary panel. Hook lift belt onto distance strap so that it is held firmly in position (easiest to hook from above at an angle as shown). Ensure the lift belt is firmly in place before use.

Important! This overhead lift has been designed and tested for indoor use with one patient at a time. This product must not be immersed in water. Read all instructions for full product information!
