Choose the loop combination that will give the most comfortable and safe suspension angle, keeping in mind the patient's ability to support themselves.

Green Strap
Increased Recline
Less hip flex and greatest angle

Yellow Strap
Semi-Recumbant
Mid-hip angle

Red Strap
Upright Position
Least hip angle

Match colours on both sides of the patient for a 90 degree angle in the hips.

For Models NSB-401-ST and NSB-451-U angle adjustment not applicable.

Hanger Bar Used

The Positioning Sling is designed to assist a caregiver to safely and securely perform safe patient handling during sudden or intended positioning/repositioning, turning and lateral transfer from a supine position. This sling is offered in a reusable or single patient use model. The reusable model can be placed behind the patient much like a sheet and can remain behind the patient for short periods of time. The unique material facilitates air flow and breathability and does not promote skin breakdown. The single patient use model offers the convenient option of disposal after use combined with the added benefit of hygiene control. All slings fit standard hospital beds.
